

Abstract

CONDUCTOR TRACK LAYER STRUCTURE AND PRESTAGE THEREOF

5

10 The invention relates to a conductor track layer structure
precursor stage with conductor tracks, which are disposed on
an electrically insulating substrate with an inner region and
a lateral peripheral region and which are connected via
15 conductor track current lines to at least one current line
which extends in the lateral peripheral region. Per conductor
track, there is one conductor track current line. The
conductor tracks are electrically insulated from one another
within the inner region of the conductor track layer structure
precursor stage. The invention also relates to a conductor
20 track layer structure which can be obtained from the conductor
track layer structure precursor stage.
